THE ELEVATE SOLUTION

The extremely lightweight with high compression strength, Elevate device is an essential solution for airway management and safety. Its unique shape and curvilinear design allows for increased contact surface area as well as multiple orientation use. The elevate device provides the support needed against the constant downward pull on the endotracheal tube or tracheostomy tube due to the ventilator circuit weight while helping maintain secure airway.

ELEVATE MAIN BENEFITS

SAFETY

- Provides the support needed to decrease risk of endotracheal tube movement and even unplanned extubations.
- Its proprietary tip with bilateral slit design allows for holding multiple diameter tubes as well as ventilator circuit and adaptors when opened to maximum while providing a better overall hold compare to stacked towels.

SINGLE-USE

- Single-use latex-free and easy to use device.
- Better option compared to current solution such as stacked-up reusable towels while decreasing risk of infections.

OTHER BENEFITS

- Reduces skin-breakdown by eliminating constant pull and tug on the endotracheal tube holder devices such as the ETAD.
- Increased patient comfort compared to current everyday solution such as stacked-up towels that increase discomfort due to heating up body contact area.
- Reduces lip-breakdown and ulcerations by keeping the endotracheal tube elevated.

KEY FEATURE:

-  Super Lightweight high compression strength 2 stage crosslinked polyethylene material.
-  Proprietary opening tip with dual slit design that allows better hold.
-  Unique shape allows for the device to be used in multiple orientations.
-  Disposable and latex free.
